RE: Magellan Midstream Partners, LP
Galena Park, TX Phase 3 Expansion Project

Dear Mr. Page:

We at Magellan Midstream Partners want you to know that we are very pleased with the quality of service your company has provided during the successful completion of the 500 Series Manifold installation, a major part of the Galena Park Phase 3 Tank Expansion project. Chemtec provided a price competitive proposal as a construction alternative based on shop fabrication vs. field construction.

The advantages of the work being performed in a controlled fabrication shop were evident, as the project had very limited disruption to field operations; and the shop environment allowed the project to continue to be productive during inclement weather that would have otherwise slowed the project. The overall quality of workmanship in your fabrication shop was displayed by the fact that the field installation went smoothly.

The qualified shop and office staff at Chemtec and emphasis on providing high quality workmanship were critical to the success of the project. We sincerely appreciate your responsiveness and the way you conduct business. We look forward to future business opportunities to work together.

Sincerely,

Magellan Midstream Partners, LP
